4. Frontend and UI Features

Feature	File	What it does
Main dashboard	App.tsx	Controls app state, login gate, theme toggle, header, layout grid, stats, form, list, insights, and charts.
Manual add expense	ExpenseForm.tsx	Inputs for description, amount, date, category, and optional notes. Creates an Expense object with generated id.
Optional notes	ExpenseForm.tsx, ExpenseList.tsx	Notes are optional and capped at 700 characters. Receipt scans can auto-fill notes with item details.
Edit/delete expense	ExpenseList.tsx	Each expense row supports inline edit for description, amount, date, category, notes, plus delete.
Stats details	StatsOverview.tsx	Clickable stat cards open detail modals for total spent, this month, and AI categorized expenses.
Charts	SpendingChart.tsx, CategoryPieChart.tsx	Shows category totals, pie chart, time ranges, search filters, and animated full chart modal.
Themes	App.tsx, index.css	Class-based light/dark theme; recent dark-mode CSS makes cards, inputs, hovers, and panels consistent.
Reusable UI	components/ui/*	Small Button, Card, Input, Label primitives shared across screens.
