Piece	Purpose
~/Library/LaunchAgents/com.local.expenseai.server.plist	Generated by the launcher to run Python http.server or the Node fallback.
http://127.0.0.1:8000/index.html	Stable local URL used by the desktop app. Keeping the same origin helps preserve browser localStorage data.

Desktop Launch Flow

1. User double-clicks ExpenseAI.app on the Desktop.
2. The shell launcher checks whether http://127.0.0.1:8000/index.html is reachable.
3. If the server is not running, the launcher writes a LaunchAgent plist and starts it.
4. The LaunchAgent serves the built site from Contents/Resources/site.
5. The launcher opens the local URL in the default browser.

9. Build, Run, and Important Files

Command	Meaning
npm run dev	Starts the Vite development server for local development.
npm run build	Runs TypeScript checks and creates the production build in dist/.
npm run preview	Serves the built Vite output for preview.
cp -R dist/. ExpenseAI.app/Contents/Resources/site/	Syncs the production build into the local app bundle.
cp -R dist/. /Users/aswinsanthosh/Desktop/ExpenseAI.app/Contents/Resources/site/	Syncs the build into the Desktop app copy.

Key Source Files

File	Role
src/App.tsx	Application shell, state, login gate, theme toggle, layout.
src/components/ExpenseForm.tsx	Manual expense entry, optional notes, AI suggestion UI, receipt scan handoff.
src/components/ReceiptScanPanel.tsx	Photo upload, live camera, webcam capture, Tesseract.js OCR.
src/utils/receiptParser.ts	Receipt amount, merchant, item, confidence, and warning extraction.
src/utils/aiEngine.ts	Category suggestions, actionable tips, insights, category totals.
src/components/ExpenseList.tsx	Expense display, optional notes display, edit and delete controls.
src/components/CategoryPieChart.tsx	Time-filtered category pie chart, modal, search, SVG rendering.
src/lib/auth.ts	Local demo sign-up/login/current-user helpers.
src/index.css	Tailwind entry, chart animations, dark-theme overrides.

10. Current Limitations and Production Improvements
